Jorge Páramo

Senior Software Engineer

Dallas, TX · (682) 559-1185 · mail@jorgeparamo.dev · jorgeparamo.dev · github.com/jrgparamo · salesforce.com/trailblazer/jparamo

SUMMARY

Senior software engineer with 10+ years designing, building and supporting scalable, secure customer platforms for global brands across digital and retail channels. Experienced in APIs, service and data integrations, event instrumentation, performance and reliability, leading cross-team delivery, mentoring engineers, and adopting AI-assisted development tools.

TECHNICAL SKILLS

Languages: Java, JavaScript (Node.js), TypeScript, Python, SQL

APIs & integration: REST APIs, third-party and payment integrations, batch jobs and data pipelines, event tracking (Algolia Insights, GA4, Tealium)

Cloud & platforms: Salesforce Commerce Cloud, Composable Storefront (PWA Kit) and Managed Runtime, Cloudflare edge workers, Vercel; MongoDB, Algolia

Reliability & security: caching, performance tuning, high-traffic launch protection, bot mitigation, PII encryption, GDPR/CCPA

Practices: Agent Orchestration (Opencode, Bionic, GitHub Copilot App), Automated unit testing (Mocha, Chai), code review, Git, Agile/Jira, AI-assisted development (GitHub Copilot), React, Next.js

EXPERIENCE

Red Van (client: New Balance), Remote — Senior Fullstack Engineer **Aug 2021 – Present**

Product Discovery team, global platform across NA, EMEA and APAC; lead engineer on 222 of 450+ work items.

- Led the Algolia search migration across multiple international storefronts, coordinating merchandising, analytics and regional teams, with a hybrid fallback that kept non-migrated regions running.
- Re-architected the product data feed and built an automated batch job replicating index settings across environments, resolving payload-limit failures and removing manual promotion steps.
- Designed a conditional caching layer that preserved edge caching while serving personalized search sorting, sharply reducing server load.
- Launched an in-store associate app on Composable Storefront (PWA Kit), cut its product grid load times by **40%**, and optimized APIs for the associate iPad app.
- Integrated customer data across services: 3D foot-scan profiles via secure tokens, order-history syndication for personalized recommendations, and PII encryption in review feeds for GDPR/CCPA.
- Provided production support for tier-1 sneaker launches, keeping checkout stable under extreme traffic with Queue-it waiting rooms, session tokens and bot throttling.
- Restored and expanded event telemetry (click, conversion, null-search, GA4) for accurate revenue attribution; a Japan canonical URL fix protected **~$770K** in annual organic revenue.
- Led headless and Managed Runtime architecture spikes to guide platform modernization; used GitHub Copilot extensively in development and, as a member of the AI Community of Practice, evaluated AI-assisted developer tools and AI-driven solutions.

Red Van, Remote — Senior Salesforce Commerce Cloud Developer **Aug 2020 – Aug 2021**

- Delivered custom, performance-optimized storefronts for Claire's, Vermont Teddy Bear, Lush and Warrior, lifting conversion and click-through rates.

LiveArea, Allen, TX — Technical Lead **May 2018 – Aug 2020**

- Built Salesforce LINK integration cartridges (Aurus, Bloomreach) and integrated payment providers, including PayPal, into production checkout.
- Mentored and led in-house engineers, coaching their technical and collaboration skills.

LiveArea, Allen, TX — Senior Software Engineer **Oct 2015 – May 2018**

- Built e-commerce solutions for Procter & Gamble, Party City and Movado with distributed and in-house teams, including a custom order management integration that shortened Olay delivery times.

EDUCATION & CERTIFICATIONS

University of Texas at Austin — B.A. Economics; Computer Science · May 2015

Salesforce Certified B2C Commerce Cloud Developer (Active) · Issued Sept 2019

Salesforce Composable Storefront (B2C201) · Issued April 2025
